

## **Developing Web Components**

#### Audience Course Developing Web Components

The course Developing Web Components is intended for Web Developers who want to learn how Web Components can be applied in modern web applications.

#### **Prerequisites Course Developing Web Components**

To participate in this course, good knowledge of the basics of Web Applications with HTML and CSS and knowledge of JavaScript is required.

#### **Realization Training Web Components**

The theory is explained with slides and demos. The course has a hands-on character. Explanations are interchanged with exercises.

#### **Certificate Course Web Components**

After successfully completing the course, attendants will receive a certificate of participation in Web Components.

### **Content Course Developing Web Components**

In the course Developing Web Components, participants learn to use web platform APIs to create new self-defined Web Components with their own HTML tag, encapsulated styles and their own behavior. The participants learn to work with Custom Elements, Shadow DOM and HTML Templates.

#### Introduction to Web Components

The course Developing Web Components starts with an overview of Web Components and the benefits they offer in terms of encapsulation, reusability and interoperability. Participants will gain a foundational understanding of the key concepts and technologies that underpin Web Components, like Custom Elements, the Shadow DOM and HTML Templates.

#### **Custom Elements**

Next attention is paid how Custom Elements can be defined and used. Topics include Custom Element lifecycle, properties, attributes, and events, as well as best practices for creating and extending Custom Elements.

#### **ES Modules**

Also ES Modules are covered which enable modular code organization and dependency management in JavaScript development. Subjects are how to create, import, and export ES Modules, and how to structure projects using this powerful module system.

#### Shadow DOM

The Shadow DOM is discussed as well and it is explained how to encapsulate styling and markup within Web Components, ensuring isolation and preventing style leakage. Attention is paid to creating Shadow Roots, styling Shadow DOM content and using slots for content projection.

#### **HTML Templates**

Part of the subject matter of the course Developing Web Components are also HTML Templates which form a mechanism for defining reusable markup structures. It is explained how HTML Templates allow encapsulating and instantiating complex HTML structures, enabling flexible and efficient component composition in Web applications.

#### **Advanced Web Components**

Finally advanced techniques and patterns for developing Web Components are treated. Here composition and communication between Web Components, integrating Web Components in Microservices Architectures and optimizing performance and accessibility are covered.

# **Modules Course Developing Web Components**

Module 1 : Intro Web Components	Module 2 : Custom Elements	Module 3 : ES Modules
What are Web Components?	Intro Custom Elements	ECMA Standard
Benefits of Web Components	Defining Custom Elements	Module Systems
Web Component Specifications	Lifecycle Hooks	CommonJS Modules
Custom Elements	Attributes and Properties	Asynchronous Module Definition
Shadow DOM	Event Handling	Internal Modules
Style Encapsulation	Extending Built-in Elements	External Modules
ES Modules	Naming Conventions	Imports and Exports
HTML Templates	JavaScript Libraries	Module Scopes
Browser Support	Platform API's	Module Instantiation
Environment Setup	Polyfills	Dependency Graphs
Create First Web Component	Browser Compatibility	WebAssembly Integration
Module 4 : Shadom DOM	Module 5 : HTML Templates	Module 6 : Advanced Web Components
Module 4 : Shadom DOM What is Shadow DOM?	Module 5 : HTML Templates What are HTML Templates?	Module 6 : Advanced Web Components Composing Web Components
What is Shadow DOM?	What are HTML Templates?	Composing Web Components
What is Shadow DOM? Encapsulation	What are HTML Templates? Creating HTML Templates	Composing Web Components Component Interaction
What is Shadow DOM? Encapsulation Creating Shadow Roots	What are HTML Templates? Creating HTML Templates Content Insertion	Composing Web Components Component Interaction Custom Events
What is Shadow DOM? Encapsulation Creating Shadow Roots Styling Shadow DOM Content	What are HTML Templates? Creating HTML Templates Content Insertion Markup Fragments	Composing Web Components Component Interaction Custom Events Shadow DOM Composition
What is Shadow DOM? Encapsulation Creating Shadow Roots Styling Shadow DOM Content Scoped CSS Variables	What are HTML Templates? Creating HTML Templates Content Insertion Markup Fragments Template Cloning	Composing Web Components Component Interaction Custom Events Shadow DOM Composition Slot Receptacles
What is Shadow DOM? Encapsulation Creating Shadow Roots Styling Shadow DOM Content Scoped CSS Variables Shadow DOM Slots	What are HTML Templates? Creating HTML Templates Content Insertion Markup Fragments Template Cloning Template Instantiation	Composing Web Components Component Interaction Custom Events Shadow DOM Composition Slot Receptacles Named Slots
What is Shadow DOM? Encapsulation Creating Shadow Roots Styling Shadow DOM Content Scoped CSS Variables Shadow DOM Slots Shadow DOM Events	What are HTML Templates? Creating HTML Templates Content Insertion Markup Fragments Template Cloning Template Instantiation Parameterized Templates	Composing Web Components Component Interaction Custom Events Shadow DOM Composition Slot Receptacles Named Slots Conditional Rendering
What is Shadow DOM? Encapsulation Creating Shadow Roots Styling Shadow DOM Content Scoped CSS Variables Shadow DOM Slots Shadow DOM Events Manipulating Shadow DOM Content	What are HTML Templates? Creating HTML Templates Content Insertion Markup Fragments Template Cloning Template Instantiation Parameterized Templates Dynamic Templates	Composing Web Components Component Interaction Custom Events Shadow DOM Composition Slot Receptacles Named Slots Conditional Rendering Internationalization
